May 2026

Hiring Manager

Dear Hiring Manager,

I am writing to apply for the Software Engineering Internship position and contribute to building scalable, real-world software systems. I am a third-year Software Engineering student at Misr International University with hands-on experience in full-stack development, mobile applications, and AI-based systems, eager to grow within a professional engineering environment.

I have built a strong foundation in software development using technologies such as Java, Python, React.js, and Node.js, along with databases including MySQL and MongoDB. This experience includes building full-stack applications, integrating real-time features, and working on AI-powered systems, which has strengthened my problem-solving and system design skills.

One of my key projects is an AI-based accessibility system using real-time computer vision to enable hands-free interaction. I also developed full-stack applications with authentication, CRUD operations, and responsive user interfaces. Across my work, I consistently apply Object-Oriented Programming principles, SOLID design principles, and design patterns, along with unit testing to ensure clean and maintainable code.

I have experience working with Agile development practices, Git version control, Docker containerization, and CI/CD workflows. These experiences have helped me understand how modern software systems are built, tested, and deployed in real-world environments.

I am particularly excited about this opportunity because it aligns with my goal of working on impactful software systems while strengthening my skills in system design, backend engineering, and DevOps practices within a collaborative team.

I would welcome the opportunity to discuss how my skills and projects align with your team's needs. Thank you for your time and consideration.

Sincerely,

Myriam Hamam Ebrahim Abdelmalek
